LIGHTING
DESIGN
AWARDS

We at Maytoni know that behind every light there are dozens of passionate people – engineers, designers, architects, managers, factory and warehouse employees, as well as their families and friends.

This catalog is dedicated to all those who fill every moment with light. After all, the moments of light circle become important only when people turn on the light inside.

Thanks to their courage, perseverance, attention to detail and love for light, every moment of the present becomes special. To turn the light on, you need someone who wants it to become lighter.

Christian Licari
CEO Maytoni GMBH

PRESENT ILLUMINATE

NIT
NATED

The physics of light is a complex, multifaceted phenomenon very close to everyday life. Maytoni employees are inspired by it every day. Violet color accompanies us everywhere for a reason. This is the first color hue in the visible spectrum of colors, the shortest light wave. This is the start of our day and the light is its engine and chronometer that allows us to feel the passing of time.

Every day we feel it both in the free and ongoing change of the cyclic-type day. Our biological rhythms depend not only on the natural change of day and night, but also on the artificial light exposure that surrounds us everywhere. Circadian rhythms are “enabled” and “disabled” by light: its exposure in the early morning hours leads to the rhythm accelerating, earlier awakening and falling asleep, and in the late evening hours it leads to the rhythm decelerating, later falling asleep and awakening. Nevertheless, the exposure to light is not only important during off-season. The correlation of artificial light with daylight and the delicate illumination at night allow you to set the internal light clock so that the value of every moment in the present never stays in the background.

Die Physik des Lichts ist ein komplexes, facettenreiches Phänomen, das jedoch sehr alltagsnah ist. Wir bei Maytoni lassen uns jeden Tag davon inspirieren. Die Farbe Lila begleitet uns nicht ohne Grund überall. Dies ist der erste Farnton des sichtbaren Farbspektrums, die kürzeste Lichtwelle. Dies ist der Beginn von unserem Heute. Und das Licht ist sein Motor und Chronometer, das es uns ermöglicht, den Lauf der Zeit zu spüren.

Wir spüren dies jeden Tag in der freien und beweglichen Veränderung der zyklischen Natur. Unser biologischer Rhythmus hängt nicht nur vom natürlichen Wechsel von Tag und Nacht ab, sondern auch vom künstlichen Licht, das uns überall umgibt. Der zirkadiane Rhythmus wird durch Licht «ein- und ausgeschaltet»: Lichteinwirkung in den frühen Morgenstunden führt zu einem schnelleren Rhythmus, einem früheren Aufwachen und Einschlafen, und in den späten Abendstunden zu einem langsameren Rhythmus, einem späteren Einschlafen und Aufwachen. Die Lichteinwirkung ist jedoch nicht nur in den Übergangszeiten wichtig. Das Zusammenspiel von künstlichem Licht mit dem Tageslicht und die zarte Beleuchtung in der Nacht ermöglicht es, die innere Lichtuhr so einzustellen, dass der Wert eines jeden Augenblicks in der Gegenwart nie in den Schatten gestellt wird.

MORNING

Neoclassic

Classic
house

INTERIORS

Classic
ceiling

Modern
casual

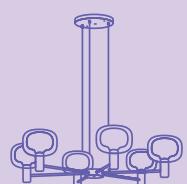

There are many ways to start and live the day using the correct lighting. This is especially important in the morning, when the dynamics of natural daylight changes throughout the year and sometimes dramatically departs from the daily routine. But there are several tools that will allow you to start your own circadian rhythm at the correct speed.

The soft diffused light will be the best option for the morning hours. It imitates the delicate dawning sun. This effect is achieved by dense textile and frosted glass diffusers that obscure the direct light source and provide maximum visual comfort. Maytoni's "mid-century modern" and "contemporary classics" collections provide you with plenty of choices of your own Sun, both for general, area and focus lighting.

Es gibt viele Möglichkeiten, den Tag im richtigen Licht zu beginnen und zu verleben. Dies ist besonders wichtig am Morgen, wenn sich die Dynamik des natürlichen Lichts im Laufe des Jahres ändert und manchmal dramatisch von der täglichen Routine abweicht. Es gibt jedoch einige Hilfsmittel, die es Ihnen ermöglichen, Ihren eigenen zirkadianen Rhythmus in der richtigen Geschwindigkeit zu starten.

Für die Morgenstunden ist ein sanftes, diffuses Licht, das die zarte Morgensonne nachahmt, am besten geeignet. Es wird durch dichte Diffusoren aus Textil und Milchglas gewährleistet, die die direkte Lichtquelle verdecken und maximalen Sehkomfort bieten. Die Maytoni-Kollektionen im Stil Mid-Century Modern und moderne Klassik bieten eine breite Palette von Möglichkeiten für die Auswahl Ihres eigenen Sonnenscheins, sei es für die allgemeine Beleuchtung, die Zonen- oder die Akzentbeleuchtung.

The Sixth Sence

All we have is the present moment. A dozen routine tasks absorb us, we get lost; forget about the most important thing. I am convinced that light and design are the two things that can bring us back to the present. The lighting scenarios that we use inside the apartment and house are our key to searching our unique "today". Special skill level is achieved when this search is made intuitively.

Imagine a lamp that can be controlled without eye contact. It is interacted on a subconscious, intuitive level. It seems unrealistic, doesn't it? But for quality design, nothing is impossible!

Developing a new series is always a creative challenge. Especially, if you have faced non-standard challenge. We developed The Sixth Sense series based on the theory of proprioception. This term was introduced by the scientist Charles Sherrington as early as in 1890. Simply stated, it is a perception of oneself, one's own body in space. This activates proprioceptors. They are on the skin, muscles, and joints. They help us to read out information about the outward and, for example, navigate in a room in complete darkness. Simply put, this is the "sixth sense" that everyone has heard about a lot of times.

Nothing should distract the consumer – he/she should be able to turn on the lamp with his/her eyes closed, in complete darkness, just focusing on his/her feelings! Therefore, we paid special attention to the sensitivity of the switches, and also got rid of all decorative and structural elements that could make it difficult to find the switch. That is why the base is also part of the electrical system of the floor lamp, from where the cord appears.

To simplify the control, we placed the switches above the dome lamps, rather than beneath. They are at arm's length when a person sits in a chair or arm-chair (or at bent arm's length when he/she stands). I think it is very convenient. At the same time, the floor lamp has two dome lamps with a moderate luminous flux. Each of them is turned on separately. You can select the light level in just one or two strokes!

I am convinced every time that design has no boundaries! It opens up new opportunities all the time. Opportunities that allow making an everybody's life better, easier and more natural. I like to create things that people really need: easy to use, relevant, contemporary and good enough to live with for a lifetime. Such project work associated with fullness, awareness, inspiration and range expansion. I hope we managed to convey this feeling and everyone who interacts with The Sixth Sense series will feel something similar.

MENTS

In the daytime, the role of a decorative lamp changes dramatically. From a necessary source of light, it turns into an object of art, an interior sculpture capable to collect the entire image of the interior and supplement it with the necessary expressive feature, thanks to which it will be remembered by all guests and permanent residents.

The main rule in choosing an accent is to find a really suitable place for it. The central chandelier in the middle of the room has finally gone out of fashion, giving place to visual zoning and the positioning of lamps where they are really useful and look maximally beautiful: above dining tables, against the background of decorated walls, next to mirrors, above bedside tables and work areas. When choosing an accent lamp, pay attention to its proportions and deal as freely as possible with the height of the suspension or fixture of the lamp. Sometimes a non-standard approach to the location is the key to the visual solution of the interior.

Another way to set the right accent in the interior is to choose a contrasting color score, the original finish of fittings and dome lamps. To do this, you can rely on the wide range of Maytoni lamps and make your own combination of materials and shades, which will become your unique piece of interior ready-made art.

Finally, Maytoni lamps are objects of design creativity based on its own philosophy and painstaking work. The author's style of the worldwide best designers will make a significant contribution to the visual quality of the image of even the most concise interior.

Bei Tage ändert sich die Rolle der Innenleuchte dramatisch. Sie verwandelt sich von einer notwendigen Lichtquelle in ein Kunstobjekt, eine Innenraum-Skulptur, die das gesamte Bild eines Innenraums zusammenfügen und ihm die notwendige Ausdruckskraft verleihen kann, die ihn für alle Gäste und ständigen Bewohner unvergesslich macht.

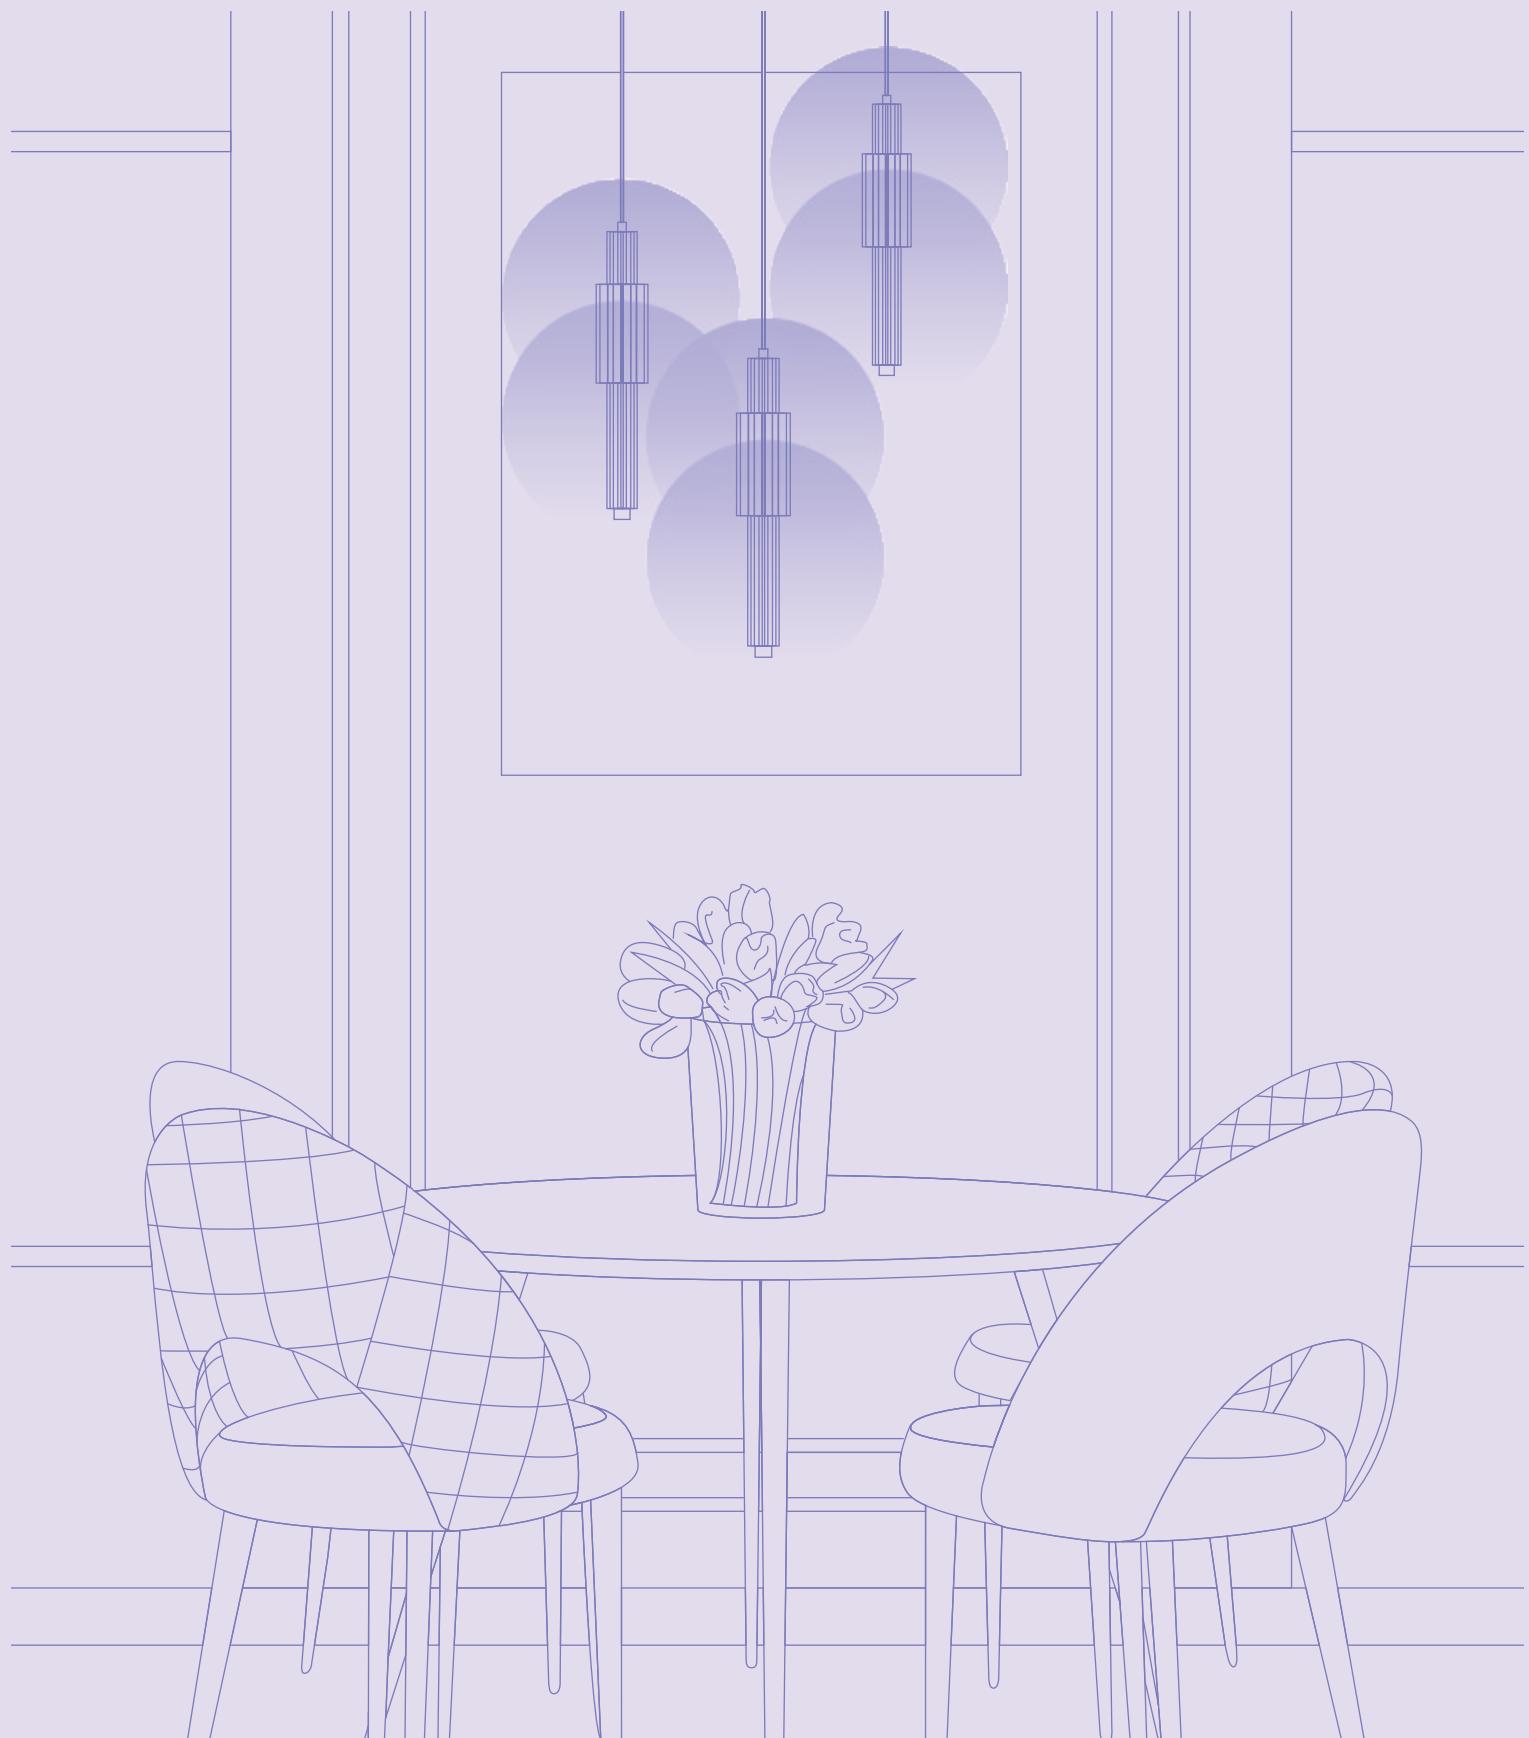

Die Grundregel bei der Auswahl eines Akzents besteht darin, einen wirklich guten Platz dafür zu finden. Die Mode für zentrale Kronleuchter in der Mitte des Raums hat einer visuellen Zonierung endgültig Platz gemacht, bei der die Leuchten dort platziert werden, wo sie wirklich nützlich sind und am schönsten aussehen: über Esstischen, an dekorierten Wänden, in der Nähe von Spiegeln, über Nachttischen und Arbeitsbereichen. Achten Sie bei der Auswahl einer Akzentleuchte auf ihre Proportionen und gehen Sie maximal locker mit der Höhe der Aufhängung oder der Befestigung der Leuchte um. Ein unkonventioneller Ansatz zur Positionierung ist manchmal der Schlüssel zur visuellen Attraktivität einer Einrichtung.

Eine weitere Möglichkeit, den richtigen Akzent im Innenraum zu setzen, ist die Wahl einer kontrastierenden Farbgebung, einer originellen Ausführung von Beschlägen und Lampenschirmen. Dazu können Sie auf das breite Sortiment von Maytoni zurückgreifen und Ihre eigene Kombination von Materialien und Farben zusammenstellen, um Ihr eigenes, einzigartiges Ready-Made-Kunstwerk der Innenarchitektur zu schaffen.

Schließlich sind die Leuchten von Maytoni Objekte der Design-Kreativität, hinter denen jeweils eine Philosophie und sorgfältige Arbeit stehen. Die Handschrift der besten Designer der Welt trägt wesentlich zur visuellen Qualität selbst der prägnantesten Einrichtung bei.

A special way to create an accent in the interior consists in using the compositions of wall lamps. They as the sources of light, reveal not only the beauty of their decorative elements, but also the objects and finishes surrounding them, and also attract attention due to the contrast of shadow and luminous elements.

The main charm of their use consists in easy scaling depending on the proportions of the interior and the general rhythm of the space. In one composition, you can use both lamps of the same series, or combine several different lamps with each other in order to achieve the most interesting interpretation.

When making compositions, you should consider a few points. If the interior has a basic shape or direction (for example, active vertical elements in furniture and decoration), then supporting and reinforcing them in the composition can be a very winning move. Also, do not forget that the compositions should look good from different viewpoints for different inhabitants of the interior. So, the composition on one of the walls of the living room behind the sofa should look good not only from the open kitchen, but also from the corridor and the chair next to the sofa. Consider perspective distortion when making your compositions. Finally, please remember that your lighting decor will interact with the interior in the daytime and in the evening, which means that the composition must be effective and visually coherent not only with the switching on lights, but also with the switching off lights. The interaction of the reflective elements of the lamp with external light and color schemes can become the main “feature” of the daytime image of your interior and give unique dynamic light pictures. Get inspired by our composition ideas and make your own!

Eine besondere Art, einen Akzent in einem Innenraum zu setzen, sind Kompositionen von Wandleuchten. Als Lichtquellen bringen sie nicht nur die Schönheit ihrer dekorativen Elemente, sondern auch die der sie umgebenden Gegenstände und Oberflächen zur Geltung und lenken die Aufmerksamkeit durch den Kontrast von Schatten- und leuchtenden Elementen auf sich.

Das Schöne an ihnen ist, dass sie sich leicht an die Proportionen des Innenraums und den Gesamtrhythmus des Raums anpassen lassen. Sie können Leuchten aus derselben Serie in einer einzigen Komposition verwenden oder mehrere verschiedene Leuchten kombinieren, um die interessanteste Interpretation zu erzielen.

Achten Sie bei der Zusammenstellung Ihrer Kompositionen auf ein paar Punkte. Wenn das Interieur eine Grundform oder -richtung hat (z. B. aktive vertikale Elemente in Möbeln und Oberflächen), kann es sehr gewinnbringend sein, diese in der Komposition zu unterstützen und zu verstärken. Denken Sie auch daran, dass die Kompositionen aus verschiedenen Blickwinkeln für verschiedene Bewohner des Innenraums gut aussehen sollten. So sollte zum Beispiel eine Komposition an einer der Wohnzimmerwände hinter dem Sofa nicht nur von der offenen Küche aus, sondern auch vom Flur und vom Sessel neben dem Sofa gut aussehen. Berücksichtigen Sie die perspektivische Verzerrung bei der Zusammenstellung Ihrer Kompositionen. Denken Sie schließlich daran, dass Ihre Lichtdekoration tagsüber und abends mit dem Innenraum interagieren wird, was bedeutet, dass die Komposition nicht nur bei eingeschalteter, sondern auch bei ausgeschalteter Beleuchtung wirksam und visuell ganzheitlich sein muss. Das Zusammenspiel der reflektierenden Elemente in der Leuchte mit dem Umgebungslicht und der Farbgebung kann das Erscheinungsbild Ihres Interieurs tagsüber wesentlich prägen und einzigartige dynamische Lichtmuster erzeugen. Lassen Sie sich von unseren Kompositionsideen inspirieren und machen Sie Ihre eigenen!

Evening light has a special atmosphere and is associated with many pleasant memories, events and familiar rituals. One of the traditional symbols of classical evening lighting are crystal lamps in all their manifestations - from classic grand dames in the living rooms and halls to chiseled diamonds in modern interiors.

Crystal lamps are a great opportunity to multiply the light. Reflected and refracted in pendants, it scatters around the room, creating the effect of bright lighting.

Das Abendlicht hat eine besondere Atmosphäre und ist mit vielen schönen Erinnerungen, Ereignissen und vertrauten Ritualen verbunden. Eines der traditionellen Symbole für eine strenge Abendbeleuchtung sind Kristallleuchten in all ihren Erscheinungsformen – von den klassischen Grandes Dames-Wohnzimmer und Säle bis hin zu den geschliffen Facetten von Diamanten der modernen Innenräume.

Kristallleuchten sind eine großartige Möglichkeit, das Licht zu vervielfachen. Das Licht wird in den Pendelleuchten reflektiert und gebrochen, so dass es sich im Raum verteilt und einen hellen Lichteffekt erzeugt.

Modern crystal p. 248
Classic elegant p. 288
Classic crystal p. 304

The mastership of staging light in an interior with crystal lamps is the creation of a special light scenography for them using the possibilities of functional light. Crystal lamps stand out most effectively with a main light focused on them, creating glare along the contour, and the use of point directional light at an acute angle also looks interesting.

Choose your own light scene and change it according to your mood with Maytoni Technical functional lighting systems.

Die höchste Kunst der Lichtorganisation in einem Innenraum mit Kristallleuchten besteht darin, mit Hilfe der Möglichkeiten der Architekturbeleuchtung eine besondere Lichtinszenierung zu erzeugen. Am auffälligsten sind Kristallleuchten mit einem auf sie gerichtetem Schlüssellicht, das die Konturen blendet, und auch die Verwendung von gerichtetem Punktlicht in einem spitzen Winkel ist interessant.

Wählen Sie Ihre eigene Lichtszene und verändern Sie sie je nach Stimmung mit den funktionalen Lichtsystemen von Maytoni Technical.

Table

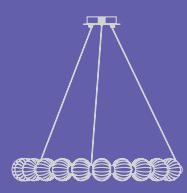

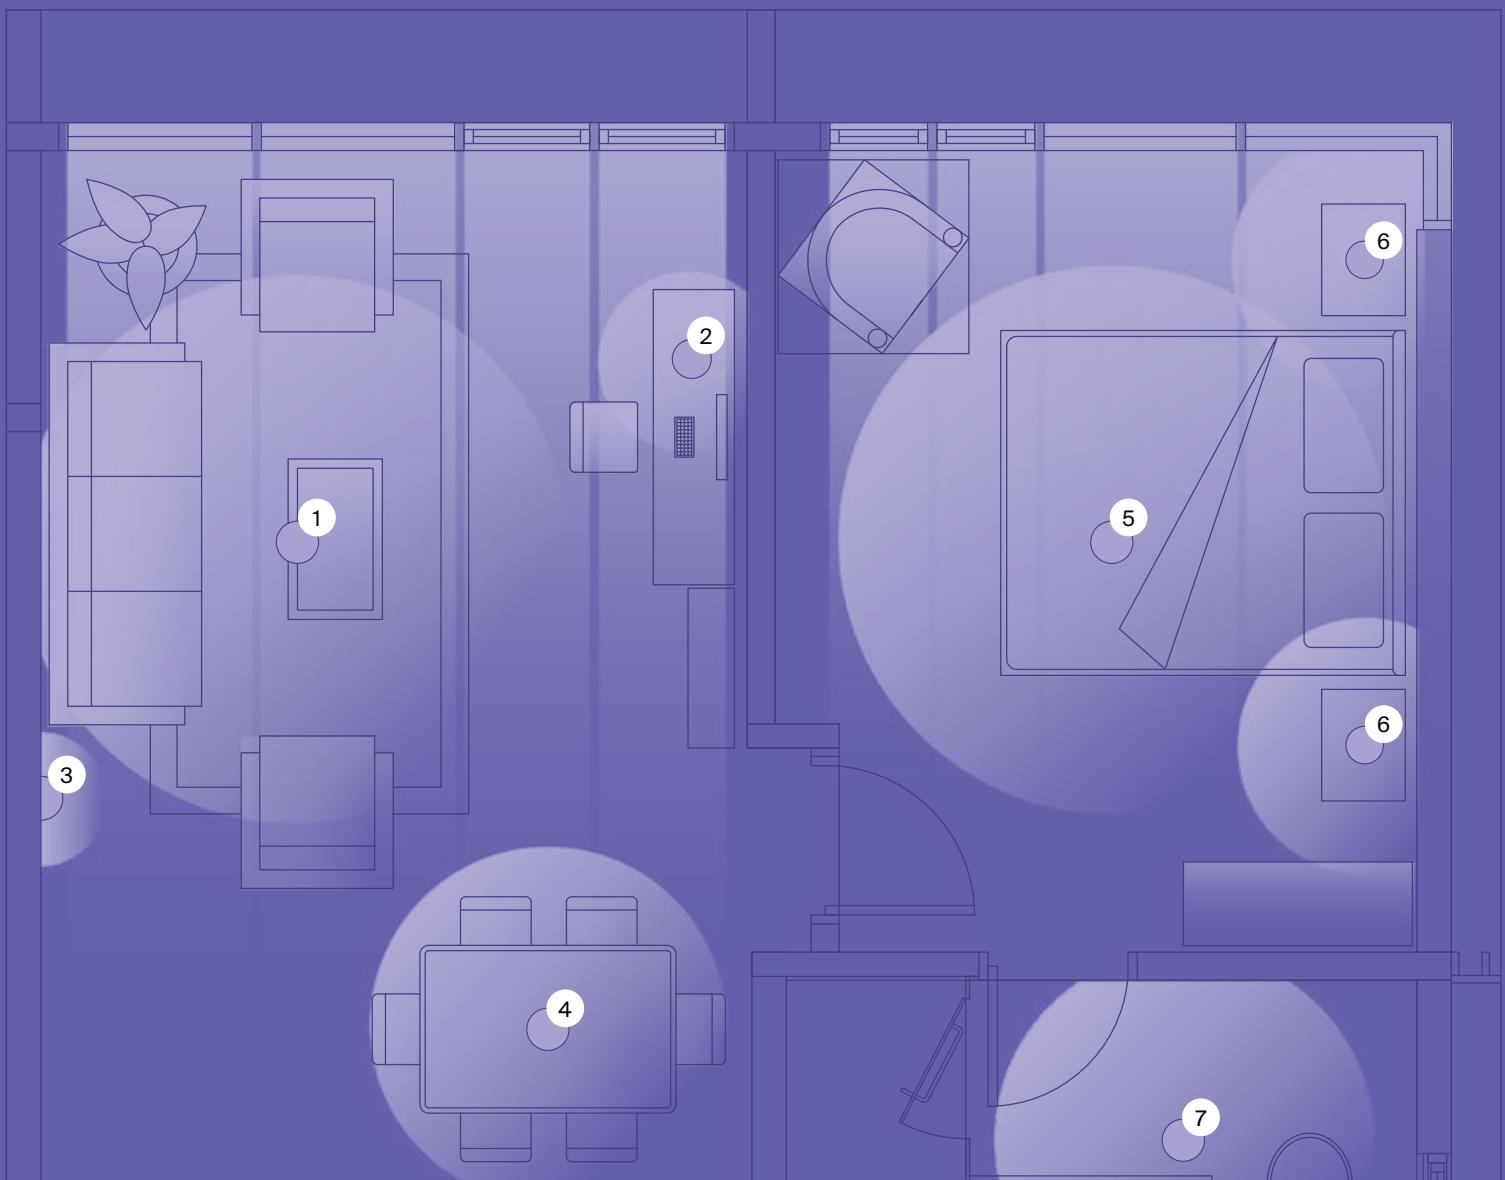

The sunset of the day is the dawn of a new horizon for our homes. In spaces without natural light, you can create any mood and form any architecture of the space – and all this thanks to light. A conscious approach to lighting design is becoming more and more popular with the spread of functional light, and the creation of various lighting scenarios for interiors has already become the ordinary practice.

However, most houses and apartments that have already been renovated do not have the flexibility of new buildings in terms of lighting design. And the need for a new light pattern often arises quite spontaneously - with the arrival of guests, the organization of a home office, the appearance of a baby in the house. That is why we are actively developing the concept of intuitive zoning, which provides the decorative lamps with all the opportunities of architectural lighting, while maintaining the standard principles of electrical installation that exist in apartments. The basic principle of the kinematics of our models for intuitive zoning is simple and safe control of the lamp, which is associated with pleasant tactile sensations. You can easily customize everything for yourself with one hand movement. The Maytoni collection has already included several series adhering to this principle with different designs.

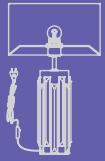

Der Sonnenuntergang des Tages ist der Anbruch eines neuen Horizonts für unsere Häuser. In Räumen, die nicht von natürlichem Licht durchflutet sind, können Sie jede beliebige Stimmung erzeugen und jede beliebige Architektur eines Raums gestalten – und das alles dank des Lichts. Mit der Verbreitung von Architekturbeleuchtung wird ein bewusster Umgang mit dem Lichtdesign immer beliebter, und die Schaffung verschiedener Beleuchtungsszenarien für Innenräume ist bereits zur Norm geworden.

Die meisten Häuser und Wohnungen, die bereits renoviert wurden, haben jedoch nicht die Flexibilität von Neubauten in Bezug auf die Lichtgestaltung. Und oft entsteht der Bedarf an einem neuen Lichtdesign ganz spontan – mit der Ankunft von Gästen, der Einrichtung eines Homeoffice, dem Erscheinen des Babys im Haus. Aus diesem Grund arbeiten wir aktiv an der Entwicklung des Konzepts der intuitiven Zonierung, das den Innenleuchten alle Möglichkeiten des architektonischen Lichts bietet und gleichzeitig die üblichen Prinzipien der Elektroinstallation in Wohnungen beibehält. Das Grundprinzip der Kinematik unserer Modelle für intuitive Zonierung ist die einfache und sichere Bedienung der Leuchte, die mit einer angenehmen Berührungsempfindung verbunden ist. Mit einer Handbewegung können Sie alles an Ihre Bedürfnisse anpassen. Die Maytoni-Kollektion umfasst bereits mehrere Serien, die dieses Prinzip mit unterschiedlichen Designs unterstützen.

ENVIRONMENTAL ARCHITECTURE

Architectural
lighting

Early evening and twilight are especially conducive to exterior lighting pictures. At this time, we still have enough natural light to perceive the entire architecture as a whole.

At the same time, it is not enough to appreciate the light pattern of decorative exterior lamps. There can be several options for facade lighting: uniform flood lighting, accent lighting and contour lighting to highlight the constructive and decorative elements of the facade, visually eliminate imperfections, as well as background lighting of the space around the house for a harmonious black and white pattern. Make compositions and place the right accents for a bright end to the day.

Der frühe Abend und die Dämmerung begünstigen besonders gut die Bilder von Außenbeleuchtung. Zu diesem Zeitpunkt haben wir noch genügend natürliches Licht, um die gesamte Architektur ganzheitlich wahrzunehmen.

Dabei gibt es das bereits wenig genug, um das Lichtmuster der dekorativen Außenleuchten zu schätzen. Es gibt mehrere Möglichkeiten der Fassadenbeleuchtung: gleichmäßige Flutlichtbeleuchtung, Akzentbeleuchtung und Konturbeleuchtung zur Hervorhebung der Struktur und der dekorativen Elemente der Fassade, zur optischen Korrektur von Mängeln sowie Hintergrundbeleuchtung rund um das Haus für ein harmonisches Licht- und Schattenspiel. Komponieren und setzen Sie die richtigen Akzente, um einen hellen Abschluss des Tages zu setzen.

Lighting for walls,
steps and paths

OUTDOOR ENVIRONMENTS

Modern
lighting

Functional and decorative illumination of the local area is two facets of the same lighting genre. By combining different exterior and landscape lamps and making individual lighting compositions, you can create your own unique lighting scenario.

Outdoor lighting at night is not limited to strictly functional tasks. It enables to work with the geometry of the illuminated space, place accents and note the advantages. A wall lamp with a bidirectional light flux can advantageously emphasize the architectural elements of the facade. Floor models will mark the path leading to the house in the dark, and downlights will illuminate the steps – one of the most traumatic areas in the entire territory. Finally, ground floodlights will allow you to enjoy the beauty of the night garden landscape.

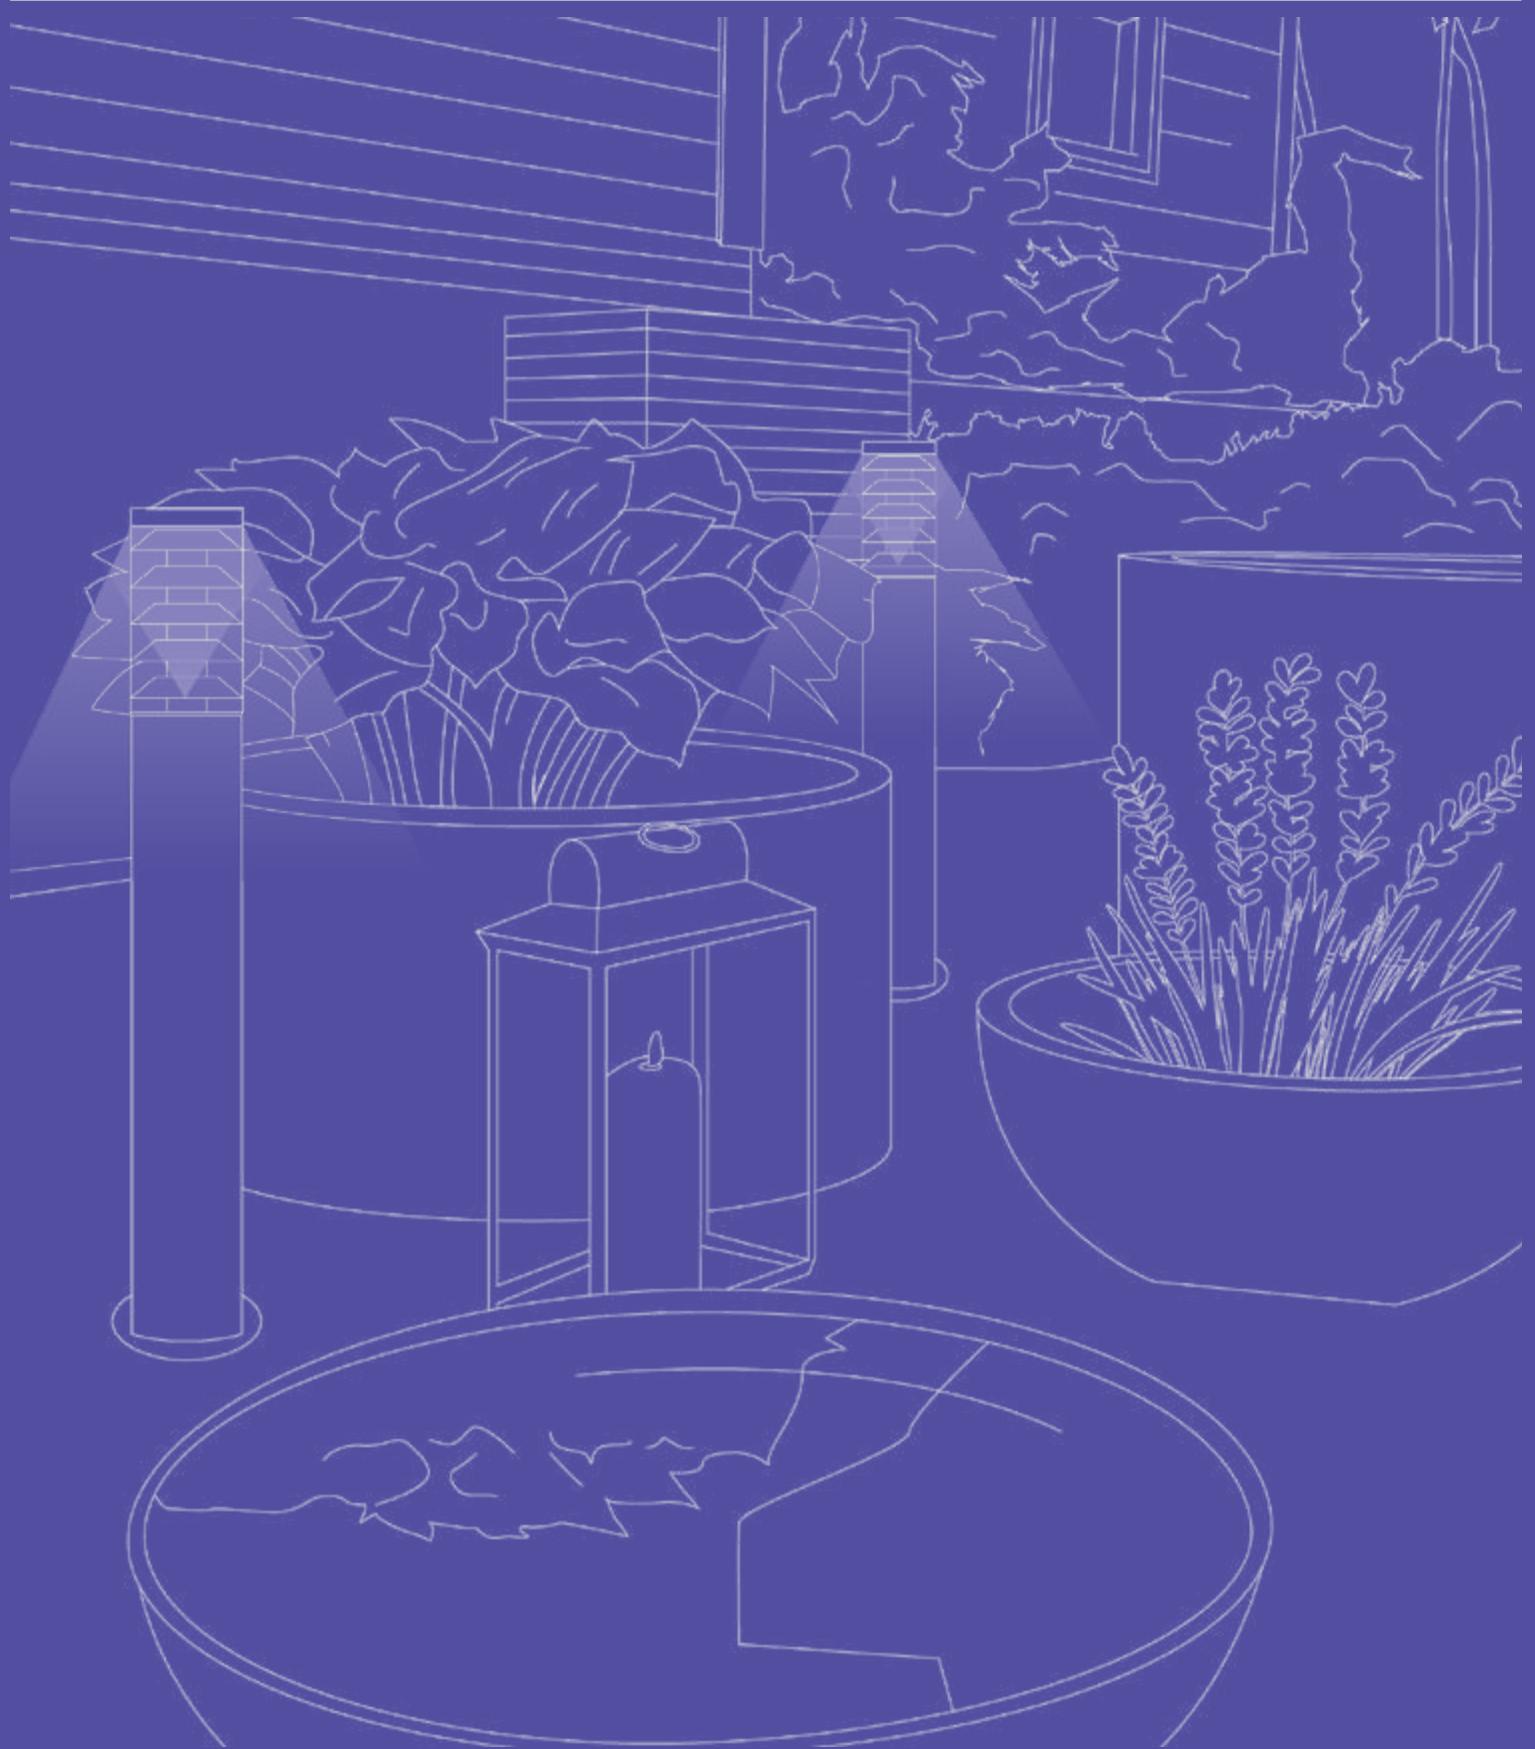

Each light source performs its own mission, but invariably serves one common goal – to reveal the individuality of the exterior space. That is why, decorative lighting evolves and changes, takes on new forms and incarnations with each following project. In other words, only your imagination dictates what it will be like. Lighting designers take into account the peculiarities of the local area, developing a personal lighting scheme: for one area, the contour lighting of the building will be a winning solution, in another case, the rays of light will be directed to trees or a pond. Try to install the projector in the ground and direct it up to the top of a tree or shrub you will receive a fascinating play of light and shadows. And this is just one of many options.

Die funktionale und die dekorative Beleuchtung der am Haus gelegenen Fläche sind zwei Facetten einer Beleuchtungsart. Durch die Kombination verschiedener Außen- und Landschaftsleuchten und die Schaffung individueller Lichtkompositionen können Sie Ihr eigenes einzigartiges Beleuchtungsszenario schaffen.

Die Außenbeleuchtung in der dunklen Tageszeit ist nicht auf rein funktionale Aufgaben beschränkt. Sie gibt Ihnen die Möglichkeit, mit der Geometrie des zu beleuchtenden Raumes zu arbeiten, Akzente zu setzen und Vorzüge zu betonen. Eine Wandleuchte mit bidirektionalem Lichtstrom kann die architektonischen Elemente der Fassade hervorheben. Bodenmodelle beleuchten bei Dunkelheit den Weg zum Haus, während Einbauleuchten die Treppe beleuchten, einen der verletzungsgefährlichsten Bereiche auf dem gesamten Grundstück. Schließlich können Sie mit Bodenstrahlern die Schönheit der Gartenlandschaft auch bei Nacht genießen.

Jede Lichtquelle hat ihren eigenen Zweck, dient aber immer einem gemeinsamen Ziel: die Individualität des Außenraums zu offenbaren. Aus diesem Grund entwickelt und verändert sich die dekorative Beleuchtung mit jedem Projekt und nimmt neue Formen und Realisierungen an. Mit anderen Worten: Nur Ihre Fantasie bestimmt, was sie sein wird. Die Lichtdesigner berücksichtigen die Besonderheiten der am Haus gelegenen Fläche und entwickeln ein individuelles Beleuchtungsschema: Ein Bereich profitiert von der Umrissbeleuchtung des Gebäudes, in einem anderen Fall werden die Lichtstrahlen auf Bäume oder einen Teich gerichtet. Versuchen Sie, einen Projektor in den Boden zu stellen und ihn nach oben, auf die Krone eines Baumes oder Strauches zu richten – und Sie bekommen ein faszinierendes Licht- und Schattenspiel. Und das ist nur eine der vielen Möglichkeiten.

NIGHT MON

Modern
lighting

ITEMS

Modern
lighting

Night time reveals the full potential of landscape lighting. In this case, the outdoor lamp performs several tasks at once.

The first is comfort and safety. Functional lighting includes many nuances that are important to consider when drawing up a common project.

So, the lamps located at the gate should be brighter, thus, you will protect the inner territory from strangers. For the rest of the area, choose a slightly more subdued intimate light – it will allow you to keep the magic of the night, inspiring with illusory shadows and silhouettes. The light sources are installed at a distance of 3-5 meters for the path leading to the house. It can be traditional outdoor lamps and poles, ground-mounted spotlights or downlights – each of the options will create its own unique light pattern. Keep in mind that the light sources illuminating the path must be located below eye level – otherwise they will blind the viewer.

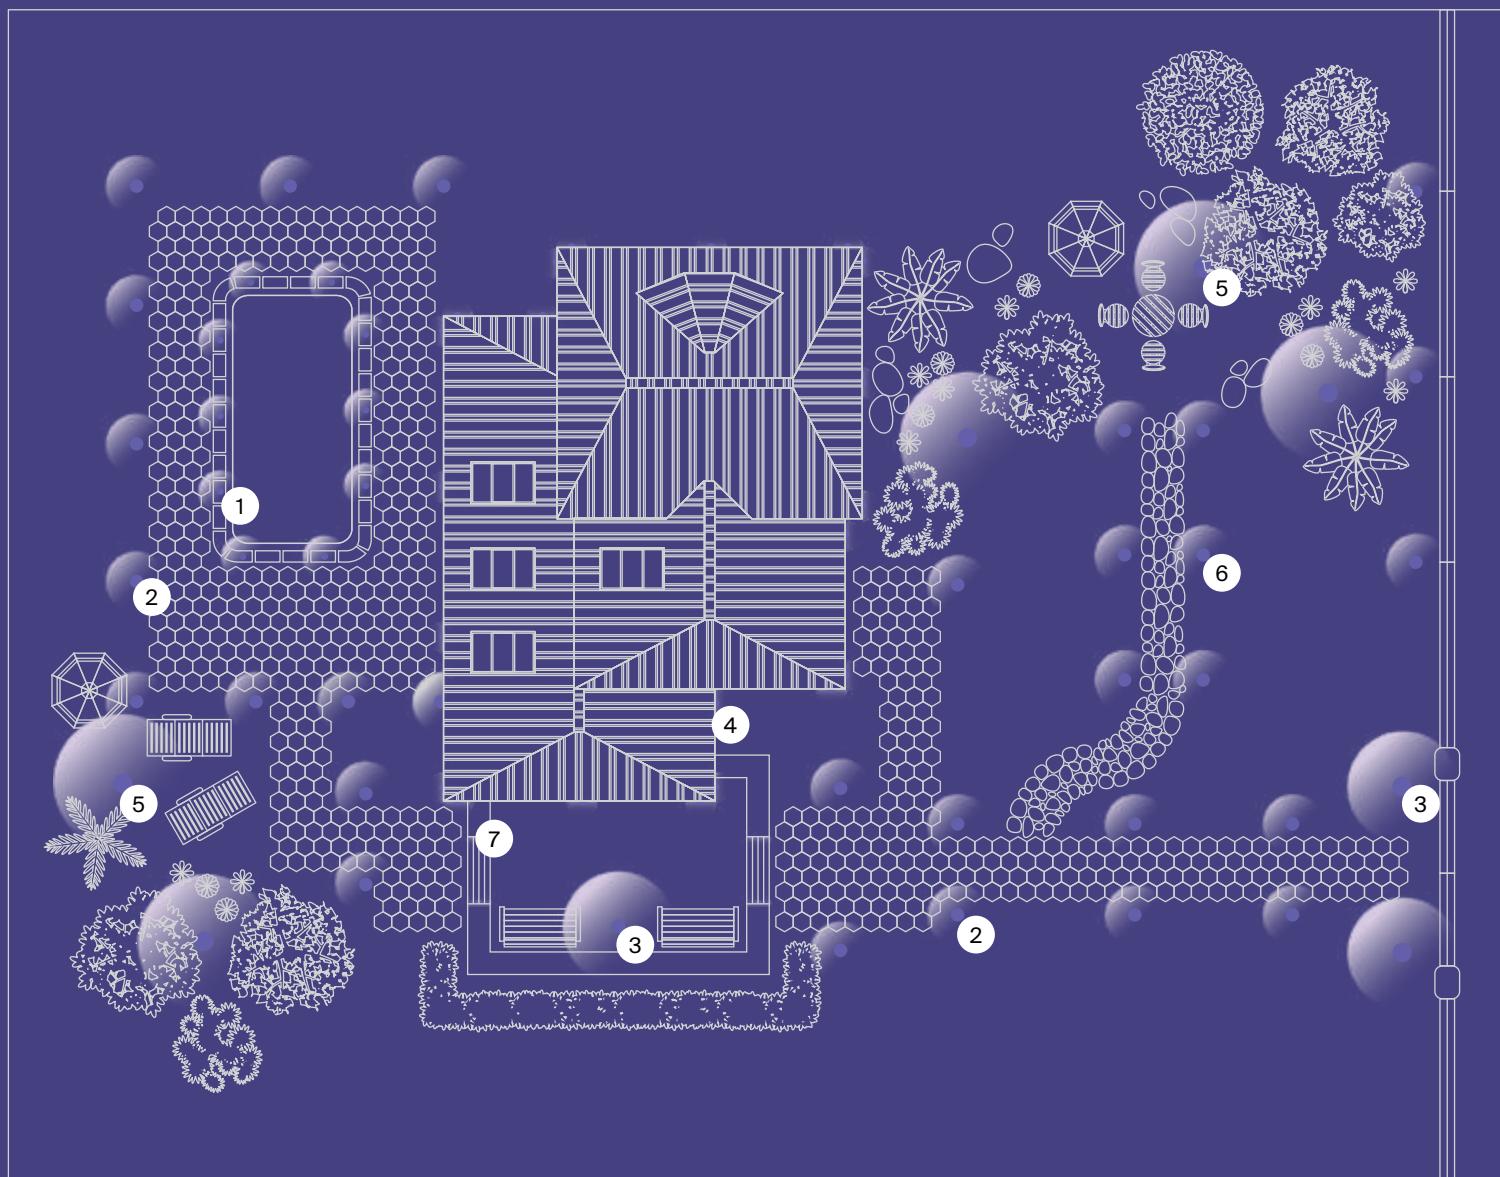

Your personal comfort and safety depend on these insignificant nuances, at first glance. At the same time, landscape outdoor lighting is not devoid of aesthetics. You can combine beauty, style and functionality in one solution – modern Maytoni outdoor lamps are marked by a trendy and ergonomic design with a minimalist mood.

In der Nacht kommt das volle Potenzial der Landschaftsbeleuchtung zur Geltung. In diesem Fall erfüllt die Außenleuchte mehrere Aufgaben auf einmal.

Die erste ist die Gewährleistung von Komfort und Sicherheit. Bei der funktionalen Beleuchtung gibt es viele Nuancen, die bei der Gestaltung des Gesamtkonzepts zu berücksichtigen sind.

Zum Beispiel sollten die Leuchten am Tor heller sein, so können Sie den Innenbereich vor neugierigen Blicken schützen. Wählen Sie für den Rest des Grundstücks ein etwas gedämpftes, intimes Licht – es hält den Zauber der Nacht lebendig, die mit illusorischen Schatten und Silhouetten inspiriert. Bei einem Weg, der zum Haus führt, sollten die Lichtquellen in einem Abstand von 3 bis 5 Metern installiert werden. Dabei kann es sich um herkömmliche Außenleuchten und Masten, Bodenstrahler oder Einbaumodelle handeln – jede Variante erzeugt ihr eigenes einzigartiges Lichtmuster. Achten Sie darauf, dass die Lichtquellen, die den Weg beleuchten, unterhalb der Augenhöhe angebracht sind – sonst blenden sie den Betrachter.

Ihr persönlicher Komfort und Ihre Sicherheit hängen von diesen scheinbar unbedeutenden Details ab. Gleichzeitig ist die Landschaftsaussenbeleuchtung nicht frei von Ästhetik. Sie können Schönheit, Stil und Funktionalität in einer Lösung vereinen – die modernen Maytoni-Außenleuchten zeichnen sich durch ein trendiges und ergonomisches Design mit minimalistischer Stimmung aus.

Paso

B

EN "Paso" series includes wall and landscape lamps that make it possible to illuminate the area and adjoining territory in the same style. Power of 12W and color temperature of 3000K are optimal for comfortable diffused lighting. The body of the lamps are made of high-quality aluminum with powder coating, which ensures the reliability and long service life.

DE Die Paso-Serie umfasst Wand- und Landschaftsleuchten, die es ermöglichen, die Beleuchtung des Grundstücks und der am Haus gelegenen Fläche in einem einheitlichen Stil zu realisieren. Die Leistung von 12 W und die Farbtemperatur von 3000K sind optimal für ein angenehmes diffuses Licht. Rahmen der Leuchten ist aus hochwertigem, pulverbeschichtetem Aluminium gefertigt und garantiert eine zuverlässige und lange Lebensdauer.

IT La serie Paso comprende lampade da parete e da esterno, che consentono di realizzare l'illuminazione del terreno e dell'area pertinente nello stesso stile. La potenza di 12W e la temperatura di colore di 3000K sono ottimali per un'illuminazione diffusa e confortevole. Il corpo delle lampade è realizzato in alluminio di alta qualità con verniciatura a polvere, che garantisce affidabilità e lunga durata.

FR La série Paso comprend des appliques murales et des luminaires paysagers, ce qui permet de réaliser l'éclairage d'un secteur et du territoire attenant à la maison dans un style uni. La puissance de 12 W et la température de couleur de 3 000 K sont optimales pour une diffusion confortable de l'éclairage. Le corps des luminaires est en aluminium de haute qualité avec un revêtement par poudre, ce qui garantit la fiabilité et une longue durée exploitation.

Classic
lighting

MORNING

OUTDOOR LUMINAIRES

Classic
lighting

It would seem that there is no need in outdoor lamps in the morning. But it is a mistake. Even without performing their direct lighting functions, they play an important role in the architectural and landscape gardening ensemble.

Inspired by the best examples of medieval urban architecture, they are adapted to modern realities, but retain a high aesthetic value and filigree elaboration. Using only high-quality materials and know-how, we have revealed traditional forms in a new light. Beauty and practicality again and again evidences the eternal relevance of the classics.

Es scheint, dass morgens keine Außenbeleuchtung erforderlich ist. Aber so ist es nicht. Auch wenn Außenleuchten nicht ihre direkte Beleuchtungsfunktion erfüllen, sind sie in der Architektur und Landschaftsgestaltung von großem Wert.

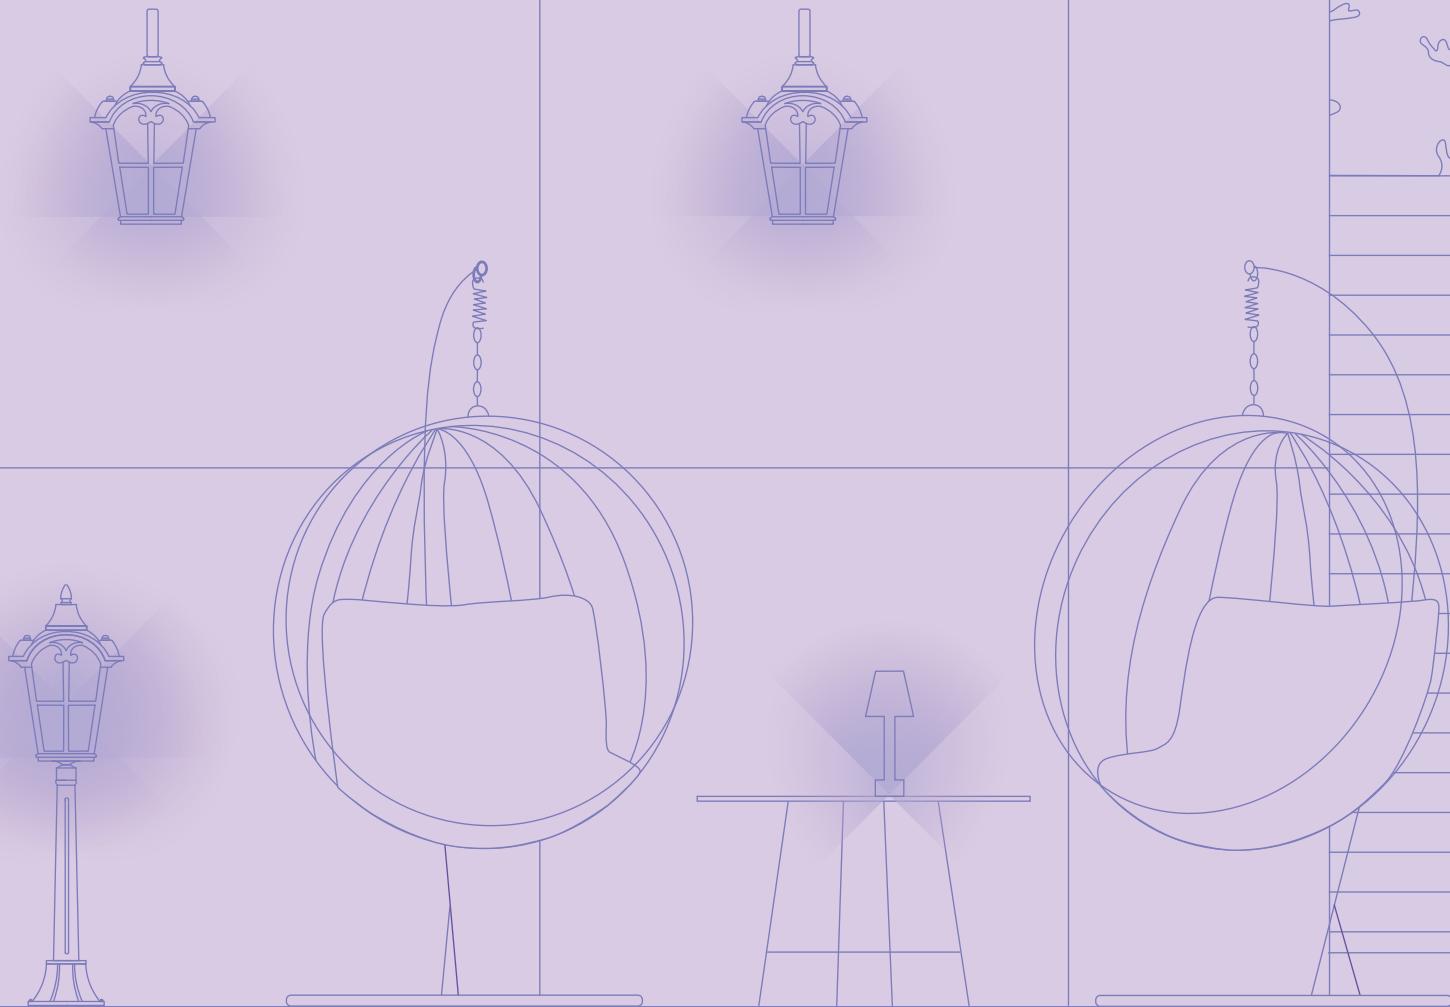

Inspiriert von den besten Beispielen mittelalterlicher Stadtarchitektur sind sie an die modernen Gegebenheiten angepasst, behalten aber einen hohen ästhetischen Wert und filigrane Handwerkskunst bei. Durch die Verwendung von nur hochwertigen Materialien und Spitzentechnologien haben wir traditionelle Formen in einem neuen Licht zum Leben erweckt. Schönheit und Zweckmäßigkeit zeugen immer wieder von der zeitlosen Aktualität der Klassik.

Only in the morning and afternoon hours, you can finally appreciate the perfection of details and the beauty of each decorative element.

Maytoni outdoor lamps in classic style – a separate kind of design art.

Nur in den Morgen- und Nachmittagsstunden kann man die feinen Details und die Schönheit der einzelnen dekorativen Elemente richtig genießen.

Die klassischen Außenleuchten von Maytoni sind eine eigenständige Art von Designkunst.

💡 Number of lamps

IP Degree of protection against moisture

 NEW	 Chandeliers, pendants
 LED lamps	 Ceiling lamps
 Mount 2 in 1	 Wall lamps
 Degree of protection against moisture	 Floor lamps
	 Table lamp
	 Downlight

Color temperature

2700K Warm light like incandescent lamp or sunrise/sunset

3000K Warm white light

4000K Neutral white light, reminiscent of the color of daytime Sun

IP PROTECTION RATING

The first digit is the level of protection against the ingress of solid particles.

0 – no protection

1 – protection against the impact of external objects with a diameter of more than 50 mm

2 – protection against the impact of external objects with a diameter of more than 12 mm

3 – protection against the impact of external objects with a diameter of more than 2.5 mm

4 – protection against the impact of external objects with a diameter of 1 mm or more

5 – full protection against contact, dust can get into the device partially (does not affect the functionality)

6 – full protection against contact, dust cannot get into the device

The second digit is moisture protection

0 – no protection

1 – protection against condensate

2 – protection against water drops

3 – protection against raindrops

4 – protection against water splashes

5 – protection against water jets

6 – protection against water

7 – protection against water penetration when immersed to a depth of 1 meter

8 – protection against water penetration during prolonged immersion
